CEROTORO — World Firsts (Headlines)

- **TiTANSTONE — Capping Infinity** — NumericalSMOOTHNESS lock. Infinity is capped by smoothness, not size.
- **SubZERO pBABY (Virtual Particles)** — Real but below Planck closure — cannot form a stable circle. Planck Polygon Principle.
- **Riemann Pipeline — Mapped & Executable** — Critical line as frequency transition; twins as motorised RadianGAP.
- **TwinPRIMES — Motorised RadianGAP** — Twist/dive cycle around the equator; instant gap small, role-swap travels the pipeline.
- **TornadoKEY — Ignition (drop → pop)** — Electron drop triggers outer pop; chain reaction through BandGAP.
- **RSA Flex — Prime Curvature Attack** — Curvature bands expose factors as low-snap valleys. No brute force.
- **CEROCHAIN + CEROQUID** — BandSNAP consensus, pSCORE passports. Finality by TitanFLOW, not waste.
- **EntanglementENGINE** — SplitSCALE + SpinDILATION: paired minima on GhostWEB; snap explains nonlocal.
- **Zipf → Linguistic Thermodynamics** — Power bands align with language frequency scaling.
- **Carbon Lock (6→8)** — Hex lattice stability; valence twins motorise curvature at small scales.
- **PrimeMAP — pZERO → TiTANSTONE → pZERO** — Outside■in navigation of number, matter, and flow.

Nature's Voice: "Somedays the sea is silent. Other days it will kill you from the roadside." — Plainsman
